

Smart TM Regular with aluminum connection trims

Pre-drilled holes are situated every 25 cm

* Please check the product and quantity before you start building your deck

Accessories

WPC F - skirting board
33 * 80

Aluminum F - connection
trim/ ventilation trim 45 * 45

Aluminum J-Trim / ventilation
Trim 45 * 15.2

WPC L- Trim/ skirting board
33 * 80

Aluminum L - corner
molding / aluminum
corner molding 45 * 45

Aluminum T- Trim 32 * 45.2

WPC end molding / skirting board
10 * 80

Screw 3,5 * 35

Rubber pad
2mm to 20mm

Tools

Screw Driver

Ruler / Tape Measure

Circular Saw

Spirit level

Joist span (50cm)

Each profile has a pilot hole every 25cm. They are used for water drainage or to fix the board to the substructure joists

Make a slope with rubber pads for water drainage

* Build the deck with a slope of 2mm per 1 meter for water drainage.

** You can use either rubber pads or plate bearings to determine the slope depending on the desired height of your deck.

If you are using the Alu J-Trim, you must start the deck at a distance of 60 mm from the wall. Please pre-drill a hole in the aluminum J-Trim and then attach it to the wall.

60mm

5m

Use the aluminum T-Trim to cover the gaps between the boards. To install the aluminum T-cladding, it can be attached with long screws or with the aluminum L-angled Trim which is attached to the extra beam underneath.

If the T-Trim is used to cover the gap of the deck extension, leave a space of at least 20mm between the end edges of the boards to allow the aluminum T-Trim to be installed

You can fasten the first board to the substructure Joist with screws, snap/click the next board onto it, then fasten it and so on and so forth.

To cover the edges along the planks, use either WPC L or F cover trims in matching colors or the aluminum L-angle trim / corner trim or the aluminum F- Trim for the finish. If you use the aluminum strips or the WPC F or L cover Trims, please make a pilot hole before you start fixing with the screws.

To close the gap between the boards and the Alu J Trim, snap/click the Aluminum L Trim/Corner Trim into the aluminum J Trim
To close the extension gap, snap the aluminum T-Trim into the aluminum L-Trim in the extension gap of the deck
